MAINTENANCE

Spirit burner, 110 g

Easy to use due to the simple construction. The Simmering ring regulates the heat and is used to save fuel or to extinguish the flame. Works in all weather conditions. In severe cold, the winter attachment can be used. The spirit burner can be used with all Trangia stoves, the Trangia Triangle (400333) and the open spirit stove (100230).

Relatively cheap fuel. Tenol eller T-röd (SE), Methylated spirits or bioethanol spirit (UK), Brennspritus (D), Ethyl alcohol or Denature alcohol (USA), Methyl alcohol or Wood alcohol (AU), Alcool à brûleur (FR), Rødsprit (N & DK), Gedenatureerde alcohol (brandspiritus) (NL), Marinol-100 or Sinol (FI). Never refill the spirit burner until the flame is completely extinguished.

One filling (max. 2/3 of its height) will burn in approx. 25 min. Boils 1 litre of water in 10 min (varies according to weather and quality of fuel). Allow generally 1.0 litre methylated spirits for cooking for 2 people per week. Effect: 1000 w/ 3500 btu.

Store the spirit burner in a plastic bag or similar to prevent corrosion of the cooking pans. Use alcohol based fuels only (such as methylated spirit). To avoid soot, dilute the fuel with max. 15% water.

Gas burner, 180 g

The gas burner is also easy to use, has fast boiling times and keeps the pans soot free. Works in all weather conditions above -22°C. The gas burner fits all Trangia stoves (except for the Mini Trangia), the Trangia Triangle (400333) and the open spirit stove (100230).

The fuel is more expensive than the fuel for the spirit burner. Fits with all propane/butane gas cartridges with EN417 compatible threaded valves. These cartridges are available in most countries around the world.

Boils 1 litre of water in 3,5 min (varies according to weather and quality of fuel). It burns 150 g gas per hour with full effect. Effect: 2100 w/ 6700 btu.

For trouble-free use of the gas burner please read the instructions enclosed with the burner where you also can find advice on cleaning and care. You can also find the instructions under "Directions for use" under "Use & care".

Multifuel burner, 525 g

The multifuel burner is a fast and safe alternative and is particularly suitable for extreme conditions, for example very low temperatures. The burner comes with a fuel bottle (0.6 litres), a pump, a multi-tool and a cover. The multifuel burner fits all Trangia stoves (except for the Mini Trangia). Somewhat more complicated to use than other burners, since pre-heating is required.

Works with many different fuels, which is an advantage when travelling to different parts of the world (especially Africa, Asia and South America) where generally the only fuels available are Petrol, Kerosene and Aviation Fuel. Petrol is recommended for temperatures below -10°C. Where possible, high quality fuels, such as white gas or alkylate petrol, should be used as they are more reliable.

Boils 1 litre of water in 4 min with gas and 4,5 min with white gas (varies according to weather and quality of fuel). It burns approx. 2 dl petrol or 116 g of cartridge gas per hour with full effect. Effect: 1600 w/ 5800 btu (cartridge gas), 1500 w/ 5200 btu (white gas).

For trouble-free use of the multifuel burner please read the instructions enclosed with the burner where you also can find advice on cleaning and care. You can also find the instructions under "Directions for use" under "Use & care".

Gel burner, 18 g

The gel burner consists of a cup with lid that is used with gel or solid fuel. It has similar qualities to the spirit burner, but has a slightly higher heat output. It is extremely easy and safe to use. The gel burner can be used with all Trangia stoves, the Trangia Triangle (400333) and the open spirit stove (100230).

Gel or solid fuel.

Boils 1 litre of water in 7 min with gel (varies according to weather and quality of fuel). Effect: 1500 w/ 5200 btu.

Coatings in the burner caused by the fuel can be washed away with water.
